

Why Our Company Must Use **AI & Data Analytics**

We already invested in digital – now we must unlock the profit.

PREPARED BY: KAMAL HOSSAIN, HUMAYUN, SANDIL AZAD

Digital Foundation to Profit

We Have the Assets:

- > **Systems:** Own ERP, CRM, Payroll & HR fully integrated.
- > **Hardware:** IoT devices and internet-enabled sewing machines.
- > **Data:** Massive historical data on production, quality, & HR.

Challenge: Most of this data is not fully used.

Solution: AI turns this data into money.

Profit & Cost: Direct Business Impact

Higher Productivity

AI detects low-efficiency lines in real time. Even 3–5% efficiency gain equals massive overtime and cost savings at our scale.

Lower Quality Cost

Finds patterns in defects by style and fabric. Predicts problems early, leading to less rework and fewer rejections.

Less Downtime

Machine data + AI predicts breakdowns before they happen. Plan maintenance smartly for stable output.

Stronger Buyer Trust & Advantage

On-time Delivery Prediction:

AI shows which orders are at risk of delay before it becomes a crisis, protecting shipments.

Reliable Quality:

Predictive quality control builds a reputation of "no surprises" for international buyers.

Data-Backed Partnership:

Performance dashboards impress buyers and support long-term, higher-value orders.

Smarter Operations & Planning

Benefits for Employees

- > Less last-minute firefighting, more planned work.
- > Better tools (dashboards) to manage lines.
- > Clear performance visibility supports fair recognition and career growth.

Smarter Planning

- > **Demand:** AI forecasts demand by season and style.
 - > **Buying:** Predicts realistic fabric needs, reducing dead stock.
 - > **Allocation:** AI predicts local market trends for higher sell-through.
- 

Why Act Now?

- > **Digital Base is Ready:**

We have the ERP & IoT infrastructure; we only need to add AI.

- > **Market Shift:**

Leading RMG factories are already adopting analytics.

- > **Low Risk, High Return:**

Start with one pilot, scale only when results are proven.

- > **Future-Proofing:**

Secures our market position for the next 10–15 years.

The Proposal

// Start a 3–6 month AI pilot using our existing data to improve efficiency and quality, then scale successful models.

Objective: Maximize output, minimize waste.

Thank You!

Ready to unlock the future of manufacturing?
